## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-7, 17-22 and 23-26 are drawn to a broad video transmitting device, classified in class 375, subclass 240.
  - II. Claims 8-16 are drawn to a video transmission system with line and repeat generation, classified in class 348, subclass 440.1.
  - III. Claims 28-31 are drawn to a method of compressing a stream of data using illumination intensity matching and line matching techniques classified in class 348, subclass 439.1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Groups I, II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because any compression scheme would apply to the invention claimed in the Group I claims. The subcombination has separate utility such that they can be used in any video compression system.

3. Because these inventions are distinct for the reasons given above and the search required for Groups II and III is not required for Group I, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
